

## **HYBRID CATALYSIS FOR VALORIZATION OF BIOMASS AND CO<sub>2</sub>**

Martin Nielsen

Department of Chemistry, Technical University of Denmark, DK-2800 Kgs Lyngby,  
Denmark, marnie@kemi.dtu.dk

We will demonstrate through several examples how the combination of a homogeneous hydrogenation metal catalyst and second catalytic entity can obtain synergistic effect to achieve transformations that are otherwise challenging. This includes tandem-reactions of biomass that occur one-pot, often quantitatively, and carbon capture and utilization.
